5955. Maximum Fruits Harvested After at Most K Steps

My Submissions (/contest/weekly-contest-271/problems/maximum-fruits-harvested-after-at-most-k-steps/submissions/)

Back to Contest (/contest/weekly-contest-271/)

Fruits are available at some positions on an infinite x-axis. You are given a 2D integer array `fruits` where `fruits[i] = [position_i, amount_i]` depicts `amount_i` fruits at the position `position_i`. `fruits` is already **sorted** by `position_i` in **ascending order**, and each `position_i` is **unique**.

You are also given an integer `startPos` and an integer `k`. Initially, you are at the position `startPos`. From any position, you can either walk to the **left or right**. It takes **one step** to move **one unit** on the x-axis, and you can walk **at most** `k` steps in total. For every position you reach, you harvest all the fruits at that position, and the fruits will disappear from that position.

Return *the **maximum total number** of fruits you can harvest*.

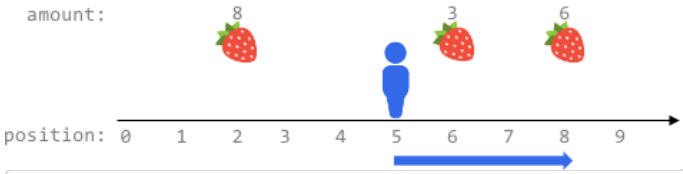
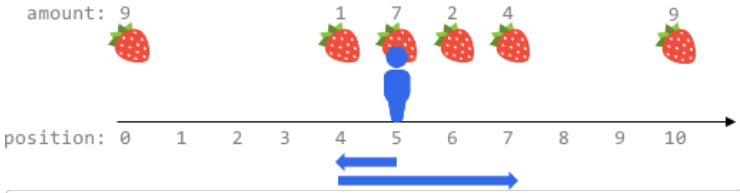
Difficulty:	Hard

Example 1:



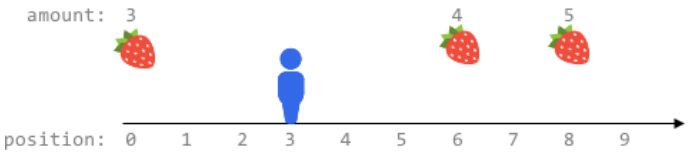
```
Input: fruits = [[2,8],[6,3],[8,6]], startPos = 5, k = 4
Output: 9
Explanation:
The optimal way is to:
- Move right to position 6 and harvest 3 fruits
- Move right to position 8 and harvest 6 fruits
You moved 3 steps and harvested 3 + 6 = 9 fruits in total.
```

Example 2:



```
Input: fruits = [[0,9],[4,1],[5,7],[6,2],[7,4],[10,9]], startPos = 5, k = 4
Output: 14
Explanation:
You can move at most k = 4 steps, so you cannot reach position 0 nor 10.
The optimal way is to:
- Harvest the 7 fruits at the starting position 5
- Move left to position 4 and harvest 1 fruit
- Move right to position 6 and harvest 2 fruits
- Move right to position 7 and harvest 4 fruits
You moved 1 + 3 = 4 steps and harvested 7 + 1 + 2 + 4 = 14 fruits in total.
```

Example 3:



```
Input: fruits = [[0,3],[6,4],[8,5]], startPos = 3, k = 2
Output: 0
Explanation:
You can move at most k = 2 steps and cannot reach any position with fruits.
```

Constraints:

- $1 <= fruits.length <= 10^5$
- $fruits[i].length == 2$
- $0 <= startPos, position_i <= 2 * 10^5$
- $position_{i-1} < position_i$ for any $i > 0$ (**0-indexed**)
- $1 <= amount_i <= 10^4$
- $0 <= k <= 2 * 10^5$

Java

```
class Solution {
    public int maxTotalFruits(int[][] fruits, int startPos, int k) {

    }
}
```
