6005. Minimum Operations to Make the Array Alternating

My Submissions (/contest/weekly-contest-280/problems/minimum-operations-to-make-the-array-alternating/submissions/)

Back to Contest (/contest/weekly-contest-280/)

You are given a **0-indexed** array `nums` consisting of `n` positive integers.

The array `nums` is called **alternating** if:

- `nums[i - 2] == nums[i]`, where `2 <= i <= n - 1`.
- `nums[i - 1] != nums[i]`, where `1 <= i <= n - 1`.

In one **operation**, you can choose an index `i` and **change** `nums[i]` into **any** positive integer.

Return *the **minimum number of operations** required to make the array alternating*.

Example 1:

```
Input: nums = [3,1,3,2,4,3]
Output: 3
Explanation:
One way to make the array alternating is by converting it to [3,1,3,1,3,1].
The number of operations required in this case is 3.
It can be proven that it is not possible to make the array alternating in less than 3 operations.
```

Example 2:

```
Input: nums = [1,2,2,2,2]
Output: 2
Explanation:
One way to make the array alternating is by converting it to [1,2,1,2,1].
The number of operations required in this case is 2.
Note that the array cannot be converted to [2,2,2,2,2] because in this case nums[0] == nums[1] which violates the conditions
```

Constraints:

- `1 <= nums.length <= 10^5`
- `1 <= nums[i] <= 10^5`

JavaScript

```
/**
 * @param {number[]} nums
 * @return {number}
 */
var minimumOperations = function(nums) {

};
```
