5161. Maximum Number of Words You Can Type

My Submissions (/contest/weekly-contest-250/problems/maximum-number-of-words-you-can-type/submissions/)

Back to Contest (/contest/weekly-contest-250/)

There is a malfunctioning keyboard where some letter keys do not work. All other keys on the keyboard work properly.

Given a string `text` of words separated by a single space (no leading or trailing spaces) and a string `brokenLetters` of all **distinct** letter keys that are broken, return *the **number of words** in `text` you can fully type using this keyboard*.

User Accepted:	0
User Tried:	0
Total Accepted:	0

Difficulty:	Easy

Example 1:

```
Input: text = "hello world", brokenLetters = "ad"
Output: 1
Explanation: We cannot type "world" because the 'd' key is broken.
```

Example 2:

```
Input: text = "leet code", brokenLetters = "lt"
Output: 1
Explanation: We cannot type "leet" because the 'l' and 't' keys are broken.
```

Example 3:

```
Input: text = "leet code", brokenLetters = "e"
Output: 0
Explanation: We cannot type either word because the 'e' key is broken.
```

Constraints:

- `1 <= text.length <= 10^4`
- `0 <= brokenLetters.length <= 26`
- `text` consists of words separated by a single space without any leading or trailing spaces.
- Each word only consists of lowercase English letters.
- `brokenLetters` consists of **distinct** lowercase English letters.

JavaScript

```
/**
 * @param {string} text
 * @param {string} brokenLetters
 * @return {number}
 */
var canBeTypedWords = function(text, brokenLetters) {

};
```
