5768. Find the Student that Will Replace the Chalk

My Submissions (/contest/biweekly-contest-54/problems/find-the-student-that-will-replace-the-chalk/submissions/)

Back to Contest (/contest/biweekly-contest-54/)

There are `n` students in a class numbered from `0` to `n - 1`. The teacher will give each student a problem starting with the student number `0`, then the student number `1`, and so on until the teacher reaches the student number `n - 1`. After that, the teacher will restart the process, starting with the student number `0` again.

You are given a **0-indexed** integer array `chalk` and an integer `k`. There are initially `k` pieces of chalk. When the student number `i` is given a problem to solve, they will use `chalk[i]` pieces of chalk to solve that problem. However, if the current number of chalk pieces is **strictly less** than `chalk[i]`, then the student number `i` will be asked to **replace** the chalk.

Return *the **index** of the student that will **replace** the chalk.*

Example 1:

```
Input: chalk = [5,1,5], k = 22
Output: 0
Explanation: The students go in turns as follows:
- Student number 0 uses 5 chalk, so k = 17.
- Student number 1 uses 1 chalk, so k = 16.
- Student number 2 uses 5 chalk, so k = 11.
- Student number 0 uses 5 chalk, so k = 6.
- Student number 1 uses 1 chalk, so k = 5.
- Student number 2 uses 5 chalk, so k = 0.
Student number 0 does not have enough chalk, so they will have to replace it.
```

Example 2:

```
Input: chalk = [3,4,1,2], k = 25
Output: 1
Explanation: The students go in turns as follows:
- Student number 0 uses 3 chalk so k = 22.
- Student number 1 uses 4 chalk so k = 18.
- Student number 2 uses 1 chalk so k = 17.
- Student number 3 uses 2 chalk so k = 15.
- Student number 0 uses 3 chalk so k = 12.
- Student number 1 uses 4 chalk so k = 8.
- Student number 2 uses 1 chalk so k = 7.
- Student number 3 uses 2 chalk so k = 5.
- Student number 0 uses 3 chalk so k = 2.
Student number 1 does not have enough chalk, so they will have to replace it.
```

Constraints:

- `chalk.length == n`
- `1 <= n <= 10^5`
- `1 <= chalk[i] <= 10^5`
- `1 <= k <= 10^9`

JavaScript

```
/**
 * @param {number[]} chalk
 * @param {number} k
 * @return {number}
 */
var chalkReplacer = function(chalk, k) {

};
```
