

# 5890. Minimum Moves to Convert String

My Submissions (/contest/weekly-contest-261/problems/minimum-moves-to-convert-string/submissions/)

Back to Contest (/contest/weekly-contest-261/)

You are given a string `s` consisting of `n` characters which are either `'X'` or `'0'`.

A **move** is defined as selecting **three consecutive characters** of `s` and converting them to `'0'`. Note that if a move is applied to the character `'0'`, it will stay the **same**.

Return the **minimum** number of moves required so that all the characters of `s` are converted to `'0'`.

Difficulty:	Easy

## Example 1:

**Input:** `s = "XXX"`  
**Output:** 1  
**Explanation:** `XXX` -> `000`  
We select all the 3 characters and convert them in one move.

## Example 2:

**Input:** `s = "XX0X"`  
**Output:** 2  
**Explanation:** `XX0X` -> `000X` -> `0000`  
We select the first 3 characters in the first move, and convert them to `'0'`.  
Then we select the last 3 characters and convert them so that the final string contains all `'0'`'s.

## Example 3:

**Input:** `s = "0000"`  
**Output:** 0  
**Explanation:** There are no `'X'`'s in `s` to convert.

## Constraints:

- `3 <= s.length <= 1000`
- `s[i]` is either `'X'` or `'0'`.

JavaScript

```
1 /**
2  * @param {string} s
3  * @return {number}
4  */
5 var minimumMoves = function(s) {
6
7  };
```
