

5867. Reverse Prefix of Word

[My Submissions \(/contest/weekly-contest-258/problems/reverse-prefix-of-word/submissions/\)](/contest/weekly-contest-258/problems/reverse-prefix-of-word/submissions/)[Back to Contest \(/contest/weekly-contest-258/\)](/contest/weekly-contest-258/)

Given a **0-indexed** string `word` and a character `ch`, **reverse** the segment of `word` that starts at index `0` and ends at the index of the **first occurrence** of `ch` (**inclusive**). If the character `ch` does not exist in `word`, do nothing.

- For example, if `word = "abcdefd"` and `ch = "d"`, then you should **reverse** the segment that starts at `0` and ends at `3` (**inclusive**). The resulting string will be `"dcbaefd"`.

Return the resulting string.

Difficulty:	Easy

Example 1:

Input: `word = "abcdefd"`, `ch = "d"`

Output: `"dcbaefd"`

Explanation: The first occurrence of "d" is at index 3.

Reverse the part of `word` from `0` to `3` (inclusive), the resulting string is `"dcbaefd"`.

Example 2:

Input: `word = "xyxxxe"`, `ch = "z"`

Output: `"zxyxxe"`

Explanation: The first and only occurrence of "z" is at index 3.

Reverse the part of `word` from `0` to `3` (inclusive), the resulting string is `"zxyxxe"`.

Example 3:

Input: `word = "abcd"`, `ch = "z"`

Output: `"abcd"`

Explanation: "z" does not exist in `word`.

You should not do any reverse operation, the resulting string is `"abcd"`.

Constraints:

- `1 <= word.length <= 250`
- `word` consists of lowercase English letters.
- `ch` is a lowercase English letter.

JavaScript

```
1 /**
2  * @param {string} word
3  * @param {character} ch
4  * @return {string}
5  */
6 var reversePrefix = function(word, ch) {
7
8  };
```
