

5718. Queries on Number of Points Inside a Circle

[My Submissions \(/contest/biweekly-contest-50/problems/queries-on-number-of-points-inside-a-circle/submissions/\)](/contest/biweekly-contest-50/problems/queries-on-number-of-points-inside-a-circle/submissions/)
[Back to Contest \(/contest/biweekly-contest-50/\)](/contest/biweekly-contest-50/)

You are given an array `points` where `points[i] = [xi, yi]` is the coordinates of the i^{th} point on a 2D plane. Multiple points can have the **same** coordinates.

You are also given an array `queries` where `queries[j] = [xj, yj, rj]` describes a circle centered at (x_j, y_j) with a radius of r_j .

For each query `queries[j]`, compute the number of points **inside** the j^{th} circle. Points **on the border** of the circle are considered **inside**.

Return an array `answer`, where `answer[j]` is the answer to the j^{th} query.

Difficulty: Medium

Example 1:

Input: `points = [[1,3],[3,3],[5,3],[2,2]]`, `queries = [[2,3,1],[4,3,1],[1,1,2]]`

Output: `[3,2,2]`

Explanation: The points and circles are shown above.

`queries[0]` is the green circle, `queries[1]` is the red circle, and `queries[2]` is the blue circle.

Example 2:

Input: points = [[1,1],[2,2],[3,3],[4,4],[5,5]], queries = [[1,2,2],[2,2,2],[4,3,2],[4,3,3]]

Output: [2,3,2,4]

Explanation: The points and circles are shown above.

queries[0] is green, queries[1] is red, queries[2] is blue, and queries[3] is purple.

Constraints:

- $1 \leq \text{points.length} \leq 500$
- $\text{points}[i].\text{length} == 2$
- $0 \leq x_i, y_i \leq 500$
- $1 \leq \text{queries.length} \leq 500$
- $\text{queries}[j].\text{length} == 3$
- $0 \leq x_j, y_j \leq 500$
- $1 \leq r_j \leq 500$
- All coordinates are integers.

Java

```
1 class Solution {  
2     public int[] countPoints(int[][] points, int[][] queries) {  
3  
4     }  
5 }
```
