

## 5187. Minimum Garden Perimeter to Collect Enough Apples

My Submissions (/contest/weekly-contest-252/problems/minimum-garden-perimeter-to-collect-enough-apples/submissions/)

Back to Contest (/contest/weekly-contest-252/)

In a garden represented as an infinite 2D grid, there is an apple tree planted at **every** integer coordinate. The apple tree planted at an integer coordinate  $(i, j)$  has  $|i| + |j|$  apples growing on it.

You will buy an axis-aligned **square plot** of land that is centered at  $(0, 0)$ .

Given an integer `neededApples`, return the **minimum perimeter** of a plot such that **at least** `neededApples` apples are **inside or on the perimeter** of that plot.

The value of  $|x|$  is defined as:

- $x$  if  $x \geq 0$
- $-x$  if  $x < 0$

### Example 1:

**Input:** `neededApples = 1`

**Output:** 8

**Explanation:** A square plot of side length 1 does not contain any apples.

However, a square plot of side length 2 has 12 apples inside (as depicted in the image above). The perimeter is  $2 * 4 = 8$ .

### Example 2:

**Input:** neededApples = 13**Output:** 16**Example 3:****Input:** neededApples = 1000000000**Output:** 5040**Constraints:**

- $1 \leq \text{neededApples} \leq 10^{15}$

JavaScript

```
1 /**
2  * @param {number} neededApples
3  * @return {number}
4  */
5 var minimumPerimeter = function(neededApples) {
6
7 };
```
