

5658. Maximum Absolute Sum of Any Subarray

[My Submissions \(/contest/biweekly-contest-45/problems/maximum-absolute-sum-of-any-subarray/submissions/\)](/contest/biweekly-contest-45/problems/maximum-absolute-sum-of-any-subarray/submissions/)

[Back to Contest \(/contest/biweekly-contest-45/\)](/contest/biweekly-contest-45/)

You are given an integer array `nums` . The **absolute sum** of a subarray `[numsl, numsl+1, ..., numsr-1, numsr]` is `abs(numsl + numsl+1 + ... + numsr-1 + numsr)` .

Return the **maximum** absolute sum of any (**possibly empty**) subarray of `nums` .

Note that `abs(x)` is defined as follows:

- If `x` is a negative integer, then `abs(x) = -x` .
- If `x` is a non-negative integer, then `abs(x) = x` .

Difficulty:	Medium

Example 1:

Input: `nums = [1,-3,2,3,-4]`

Output: 5

Explanation: The subarray `[2,3]` has absolute sum = `abs(2+3) = abs(5) = 5` .

Example 2:

Input: `nums = [2,-5,1,-4,3,-2]`

Output: 8

Explanation: The subarray `[-5,1,-4]` has absolute sum = `abs(-5+1-4) = abs(-8) = 8` .

Constraints:

- `1 <= nums.length <= 105`
- `-104 <= nums[i] <= 104`

JavaScript

```
1 /**
2  * @param {number[]} nums
3  * @return {number}
4  */
5 var maxAbsoluteSum = function(nums) {
6
7  };
```
