Design a parking system for a parking lot. The parking lot has three kinds of parking spaces: big, medium, and small, with a fixed number of slots for each size.

Implement the `ParkingSystem` class:

- `ParkingSystem(int big, int medium, int small)`
Initializes object of the `ParkingSystem` class. The number of slots for each parking space are given as part of the constructor.
- `bool addCar(int carType)` Checks whether there is a parking space of `carType` for the car that wants to get into the parking lot. `carType` can be of three kinds: big, medium, or small, which are represented by 1, 2, and 3 respectively. **A car can only park in a parking space of its `carType`.** If there is no space available, return `false`, else park the car in that size space and return `true`.

Difficulty:	Easy

Example 1:

Input

```
["ParkingSystem", "addCar", "addCar", "addCar", "addCar"]  
[[1, 1, 0], [1], [2], [3], [1]]
```

Output

```
[null, true, true, false, false]
```

Explanation

```
ParkingSystem parkingSystem = new ParkingSystem(1, 1, 0);  
parkingSystem.addCar(1); // return true because there is 1 available slot for a big car  
parkingSystem.addCar(2); // return true because there is 1 available slot for a medium car  
parkingSystem.addCar(3); // return false because there is no available slot for a small car  
parkingSystem.addCar(1); // return false because there is no available slot for a big car.
```

Constraints:

- $0 \leq \text{big}, \text{medium}, \text{small} \leq 1000$
- `carType` is 1, 2, or 3
- At most 1000 calls will be made to `addCar`

JavaScript

```
1 ▾ /**
2   * @param {number} big
3   * @param {number} medium
4   * @param {number} small
5   */
6 ▾ var ParkingSystem = function(big, medium, small) {
7
8   };
9
10 ▾ /**
11   * @param {number} carType
12   * @return {boolean}
13   */
14 ▾ ParkingSystem.prototype.addCar = function(carType) {
15
16   };
17
18 ▾ /**
19   * Your ParkingSystem object will be instantiated and called as such:
20   * var obj = new ParkingSystem(big, medium, small)
21   * var param_1 = obj.addCar(carType)
22   */
```
