

5956. Find First Palindromic String in the Array

My Submissions (/contest/weekly-contest-272/problems/find-first-palindromic-string-in-the-array/submissions/)

Back to Contest (/contest/weekly-contest-272/)

Given an array of strings `words` , return *the first **palindromic** string in the array*. If there is no such string, return an **empty string** `""` .

A string is **palindromic** if it reads the same forward and backward.

Example 1:

**Input:** `words = ["abc","car","ada","racecar","cool"]`  
**Output:** `"ada"`  
**Explanation:** The first string that is palindromic is "ada".  
Note that "racecar" is also palindromic, but it is not the first.

Example 2:

**Input:** `words = ["notapalindrome","racecar"]`  
**Output:** `"racecar"`  
**Explanation:** The first and only string that is palindromic is "racecar".

Example 3:

**Input:** `words = ["def","ghi"]`  
**Output:** `""`  
**Explanation:** There are no palindromic strings, so the empty string is returned.

Constraints:

- `1 <= words.length <= 100`
- `1 <= words[i].length <= 100`
- `words[i]` consists only of lowercase English letters.
