## 5956. Find First Palindromic String in the Array

My Submissions (/contest/weekly-contest-272/problems/find-first-palindromic-string-in-the-array/submissions/)

Back to Contest (/contest/weekly-contest-272/)

Given an array of strings words, return the first palindromic string in the array. If there is no such string, return an empty string "" .

A string is **palindromic** if it reads the same forward and backward.

### Example 1:

```
Input: words = ["abc","car","ada","racecar","cool"]
Output: "ada"
Explanation: The first string that is palindromic is "ada".
Note that "racecar" is also palindromic, but it is not the first.
```

### Example 2:

```
Input: words = ["notapalindrome","racecar"]
Output: "racecar"
Explanation: The first and only string that is palindromic is "racecar".
```

#### Example 3:

```
Input: words = ["def","ghi"]
Explanation: There are no palindromic strings, so the empty string is returned.
```

#### **Constraints:**

- 1 <= words.length <= 100
- 1 <= words[i].length <= 100
- words[i] consists only of lowercase English letters.

```
JavaScript
   const is Palindrome = (s) => { let n = s.length; let i = 0; let j = n - 1; while (i < j) { if (s[i++] != s[j--])
    return false; } return true; };
 2
 3 v const firstPalindrome = (a) ⇒ {
 4
        let res = '';
 5 ▼
        for (const s of a) {
            if (isPalindrome(s)) {
 6 ▼
 7
                res = s;
 8
                break;
9
10
        }
11
        return res;
12
    };
```
