5613. Richest Customer Wealth

My Submissions (/contest/weekly-contest-217/problems/richest-customer-wealth/submissions/) | Back to Contest (/contest/weekly-contest-217/)

You are given an `m x n` integer grid `accounts` where `accounts[i][j]` is the amount of money the ith customer has in the jth bank. Return the **wealth** that the richest customer has.

A customer's **wealth** is the amount of money they have in all their bank accounts. The richest customer is the customer that has the maximum **wealth**.

Example 1:

```
Input: accounts = [[1,2,3],[3,2,1]]
Output: 6
Explanation:
1st customer has wealth = 1 + 2 + 3 = 6
2nd customer has wealth = 3 + 2 + 1 = 6
Both customers are considered the richest with a wealth of 6 each, so return 6.
```

Example 2:

```
Input: accounts = [[1,5],[7,3],[3,5]]
Output: 10
Explanation:
1st customer has wealth = 6
2nd customer has wealth = 10
3rd customer has wealth = 8
The 2nd customer is the richest with a wealth of 10.
```

Example 3:

```
Input: accounts = [[2,8,7],[7,1,3],[1,9,5]]
Output: 17
```

Constraints:

- `m == accounts.length`
- `n == accounts[i].length`
- `1 <= m, n <= 50`
- `1 <= accounts[i][j] <= 100`

JavaScript

```javascript
/**
 * @param {number[][]} accounts
 * @return {number}
 */
const maximumWealth = (accounts) => {
    let res = 0;
    for (const a of accounts) {
        let sum = a.reduce((x, y) => x + y);
        res = Math.max(res, sum);
    }
    return res;
};
```
